

Trojan's Ranger™ 160 is an 8-volt high-performance battery that is rated at **160 minutes** and is ideal for excursions that require significantly more range than a typical golf car battery can handle.

Ranger 160 is the first US-made long range product manufactured to meet the needs of the golf car, hunting buggy, utility and low speed vehicle markets. One way to look at it, is that it is the ideal deep-cycle battery for those who need a passenger transport vehicle, otherwise known as a PTV, versus just a traditional golf cart.

Ranger 160 features stronger case walls for improved durability, and the optimized, taller case design delivers higher performance resulting in longer intervals between

charges. Its internal design has more active materials delivering higher performance for long range driving requirements plus Trojan's exclusive Maxguard® T2 multi-rib separators and T2 Technology™.

Ranger 160 provides over **35% more travel** between recharge than traditional 8-volt golf car batteries can offer making them a whole new alternative for consumers who thought that the only way to get this type of distance was with a fuel-based or hybrid vehicle. Ranger 160 features an 18 month warranty.

INTERNAL DESIGN	
FEATURES	BENEFITS
More Active Material / Taller Plates	Provides higher capacity for long range driving requirements
Trojan's Maxguard® T2 Separator	Extends battery life and lowers maintenance costs
EXTERNAL DESIGN	
FEATURES	BENEFITS
Stronger Case Walls	Increases durability for extended battery life
Taller Case	Optimized design delivers higher performance resulting in longer intervals between charges
